How to Turn Off Pop Up Blocker: A Step by Step Guide for Every Browser

Pop ups are the digital equivalent of a doorbell that rings at the wrong moment. While they can be useful—sharing a video, prompting a newsletter sign up, or providing a quick help tip—most users find them intrusive and annoying. Modern web browsers therefore include a built in pop up blocker that automatically stops unwanted windows from appearing. But what if you need to view a legitimate pop up, or you're developing a website and want to test how your own pop ups behave? In those situations, you'll need to turn off the pop up blocker.

Turning off pop up blockers is simple, but the exact steps vary from one browser to another. This guide covers the most popular desktop and mobile browsers, explains why you might want to disable the blocker, outlines the risks involved, and offers best practice tips for staying safe while browsing.

Understanding Pop Up Blockers

A pop up blocker is a feature that prevents new browser windows or tabs from opening automatically. It protects users from intrusive ads, phishing attempts, and malicious scripts that try to hijack a web page. Most browsers block pop ups by default, but they also allow you to add exceptions for trusted sites.

When a website tries to open a pop up, the browser will either block it or display a notification letting you decide whether to allow it. If you're a developer, you may want to disable the blocker temporarily to test your code. If you're a casual user, you might disable it only for a specific site that uses pop ups for legitimate purposes, such as a banking portal or an online ticket booking platform.

Why Disable a Pop Up Blocker?

There are several legitimate reasons to turn off a pop up blocker:

- Website Functionality – Some sites rely on pop ups for critical features, like account verification, password recovery, or multi step checkout processes.
- Development & Testing – Web developers need to see how their pop ups behave across different browsers and devices.
- Accessibility – Users with certain accessibility needs may prefer pop ups to be visible so they can interact with them more easily.
- Educational Content – Tutorials, webinars, or e learning platforms sometimes use pop ups to present supplementary information.

However, disabling the blocker globally can expose you to unwanted ads and potentially malicious content. The safest approach is to disable the blocker only for the specific sites you trust.

The Risks of Turning Off the Pop Up Blocker

While pop ups can be helpful, they are also a common vector for ads, scams, and malware. When you turn off the blocker, you risk:

- Unwanted Advertisements – Pop ups often display ads that can be intrusive or misleading.

- Phishing Attempts – Malicious sites may use pop ups to trick you into entering sensitive information.
- Malware Distribution – Some pop ups automatically download harmful software or redirect you to malicious sites.
- Bandwidth Drain – Excessive pop ups can slow down page load times and use up data on mobile networks.

To mitigate these risks, keep your browser and any security extensions up to date, avoid clicking on suspicious pop ups, and use the “Allow” feature only on sites you trust.

Turning Off Pop Up Blocker in Google Chrome

Chrome is the most widely used browser, and its pop up blocker can be managed easily via the settings menu.

Method 1: Disable Pop Ups for a Specific Site

1. Navigate to the site that uses pop ups.
2. Click the lock icon or the “Not Secure” text next to the URL in the address bar.
3. Select Site Settings from the dropdown.
4. Scroll to the Pop-ups and redirects section.
5. Change the setting from Block (recommended) to Allow.

Chrome will now allow pop ups only for that site, leaving the blocker active for all others.

Method 2: Disable Pop Ups Globally

1. Open Chrome’s settings by clicking the three dots in the upper right corner and selecting Settings.
2. Scroll down and click Privacy and security.
3. Select Site Settings.
4. Under Content, click Pop-ups and redirects.
5. Toggle the switch to Allow or set the default to Allow for all sites.

Remember to switch it back after you finish your task, especially if you frequently visit unfamiliar websites.

Turning Off Pop Up Blocker in Mozilla Firefox

Firefox offers a similar approach, with an emphasis on user privacy and control.

Method 1: Allow Pop Ups for a Specific Site

1. Go to the site that requires pop ups.
2. Click the shield icon next to the URL.
3. Choose Site Permissions from the menu.
4. Find Pop ups and toggle it to Allow.

Method 2: Disable Pop Ups Globally

1. Open the Firefox menu (three horizontal lines) and select Options.
2. Navigate to the Privacy & Security panel.
3. Under Permissions, uncheck Block pop-up windows or set the preference to Allow.

Firefox also provides a **Pop Up Blocker Log** in the **Debugging Tools** section, which can help you see which pop ups were blocked.

Turning Off Pop Up Blocker in Microsoft Edge

Edge, built on Chromium, shares many settings with Chrome but has its own UI.

Method 1: Allow Pop Ups for a Specific Site

1. Visit the desired website.
2. Click the lock icon next to the URL.
3. Select Cookies and site permissions.
4. Under Pop-ups and redirects, click the toggle to Allow.

Method 2: Disable Pop Ups Globally

1. Open Edge's settings menu and choose Settings.
2. Click Cookies and site permissions.
3. Scroll to Pop-ups and redirects and switch it to Allow.

Edge also offers an **Edge WebView2** feature that can manage pop ups for embedded apps.

Turning Off Pop Up Blocker in Safari (macOS)

Safari's pop up blocker is less granular but still straightforward to toggle.

Method 1: Allow Pop Ups for a Specific Site

1. Open Safari and navigate to the site.
2. Click the Safari menu and select Preferences.
3. Go to the Websites tab.
4. Find Pop-up Windows in the sidebar.
5. Set the desired site to Allow.

Method 2: Disable Pop Ups Globally

1. In the Preferences window, click Security.
2. Uncheck the box labeled Block pop-up windows.

Safari's integration with macOS also means that the system's **Gatekeeper** and **XProtect**services will still help protect you from malicious pop ups.

Turning Off Pop Up Blocker in Opera

Opera, like Chrome, offers a simple toggle for pop ups.

Method 1: Allow Pop Ups for a Specific Site

1. Visit the site.
2. Click the lock icon next to the URL.
3. Select Site Settings.
4. Find Pop-ups and set it to Allow.

Method 2: Disable Pop Ups Globally

1. Open Opera's menu and go to Settings.
2. Navigate to Advanced > Privacy & security.
3. Click Site Settings.
4. Under Pop-ups and redirects, toggle to Allow.

Turning Off Pop Up Blocker in Brave Browser

Brave is known for its aggressive ad blocking, but it still allows you to manage pop ups.

Method 1: Allow Pop Ups for a Specific Site

1. Navigate to the site.
2. Click the Brave shield icon in the address bar.
3. Select Site settings.
4. Find Pop-ups and switch it to Allow.

Method 2: Disable Pop Ups Globally

1. Open Brave's settings.
2. Click Shields in the left sidebar.
3. Under Pop ups, toggle the switch to Allow.

Managing Pop Ups on Mobile Devices

Mobile browsers also include pop up blockers, and the steps to disable them are similar to desktop versions but adapted to touch interfaces.

Android – Google Chrome

1. Open Chrome and tap the three dots in the upper right corner.
